

AMENDMENTS

AMENDMENTS TO THE CLAIMS

- 1.- 4. (Cancelled)
5. (Currently Amended) A system for call control, comprising:
- a control gateway providing control access to an IP network;
 - at least one IP device connected to the control gateway, said at least one IP device configured to control a call, the IP device adapted to translate an SIP address into one or more physical addresses on the IP network, the IP device adapted to route the call over multiple ~~parallel network call paths~~ call links to ring all phones of a set of separate phones at each of a plurality of destinations, the set of separate phones comprising a cell phone destination, a voice over IP phone, and a PBX phone, via the IP device, controlling a plurality of applications associated with the call using an SIP protocol, the applications comprising remote voice mail screening, call transfer to another phone prior to picking up a destination phone, midcall transfer to another phone, call logging, adding the call to an audio conference, putting a caller on hold, remote call hangup, ringing multiple phones on an incoming call, a screen popup on a personal computer that indicates who is calling, providing a picture of the caller, managing multiple devices and telephone numbers, controlling one button dialing from a phone, and voice dialing control.
6. (Previously Presented) The system of Claim 5, wherein the IP device controls the call using the SIP protocol, the IP device adapted to receive a particular number to be dialed from a personal computer client, the personal computer client provide the number based upon a click.
7. (Original) The system of Claim 5, wherein the IP device controls the call using a protocol having a call control portion and a voice control portion.

8. (Previously Presented) The system of Claim 5, wherein the IP device provides a service application of the plurality of applications, the service application adapted for controlling the call, the service application adapted to route the call to both a voice mail system and to a personal computer client, the service application adapted to connect the call to a PBX phone responsive to a request from the user indicative of a decision to pick up the call.
9. (Original) The system of Claim 5, further including a communications device for receiving the call.
10. (Previously Presented) The system of Claim 5, wherein the IP device controls the call using a protocol having a call control portion and a voice control portion, via the voice control portion, the IP device adapted to receive a voice command from a cell phone and determine a party to call from the voice command, the IP device adapted to cause an establishment of a connection between the cell phone and the party.
11. (Previously Presented) The system of Claim 5, wherein the IP device provides a second service application under control of the IP device, the second service application adapted to transfer the call from a cell phone to the PBX phone, the IP device adapted to receive a voice command from the cell phone, the voice command indicative of a party to call, the IP device adapted to cause a connection to be established to a third party via a dial request based upon the voice command.
12. (Previously Presented) The system of Claim 5, wherein the call is routed through a Public Switched Telephone Network and an IP network.
